ALIGNMENTS

SQ Sequence 13 AA;				DR WPI; 2001-257785/26.	Anti-angiogenesis; plasminogen; VEGF; vascular endothelial			(first entry) Li-angiogenic peptide #30. 2000WO-SG000131. 99SG-00004310. SINGAPORE NAT. SINGAPORE NAT. Prising a portion of a protein selected from plasminogen, VEGF, FLT-1 and KDR/FLK-1 are useful for treating primary. E 18; 34pp; English. Linvention relates to anti-angiogenesis peptides from a selected from plasminogen, endostatin, VEGF or FLT-1. The used to prevent or treat primary tumour growth or metasta angiogenesis
	Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides portion of a selected from plasminogen, endostatin, VEGF or invention is used to prevent or treat primary tumour growth or undesired analogenesis	tumor growth. Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides from portion of a selected from plasminogen, endostatin, VEGF or FUI invention is used to prevent or treat primary tumour growth or or undesired angiogenesis	endostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treating prumor growth. Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides from portion of a selected from plasminogen, endostatin, VEGF or FL/or invention is used to prevent or treat primary tumour growth or or undesired angiogenesis	Peptides comprising a portion of a protein selected from plasm; endostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treating ptumor growth. Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides from portion of a selected from plasminogen, endostatin, VEGF or FL/or invention is used to prevent or treat primary tumour growth or or undesired angiogenesis	Homo sapiens. WO200118030-A2. 15-WAR-2001. 01-SEP-2000; 2000WO-SG000131. 03-SEP-1999; 99SG-00004310. (UVSI-) UNIV SINGAPORE NAT. Ge R, Kini RM; WPI; 2001-257785/26. Peptides comprising a portion of a protein selected from plasm; endostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treating g tumor growth. Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides from plasminogen, endostatin, VEGF or FL; invention is used to prevent or treat primary tumour growth or or undesired angiogenesis	Anti-anglogenesis; plasminogen; VEGF; vascular endothelial grow FLT-1; tumour; metastasis; cancer. Homo sapiens. WO200118030-A2. 15-MAR-2001. 01-SEP-2000; 2000WO-SG000131. 03-SEP-1999; 99SG-00004310. (UYSI-) UNIV SINGAPORE NAT. Ge R, Kini RM; WPI; 2001-257785/26. Peptides comprising a portion of a protein selected from plasm; endostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treating g tumor growth. Claim 7; Page 18; 34pp; English. Claim 7; Page 18; 34pp; English. The present invention relates to anti-anglogenesis peptides from portion of a selected from plasminogen, endostatin, VEGF or FL; invention is used to prevent or treat primary tumour growth or or undesired anglogenesis	Anti-angiogenesis; plasminogen; VEGF; vascular endothelial grow FLT-1; tumour; metastasis; cancer. Homo sapiens. WO200118030-A2. 15-MAR-2001. 01-SEP-2000; 2000WO-SG000131. 03-SEP-1999; 99SG-00004310. (UVSI-) UNIV SINGAPORE NAT. Ge R, Kini RM; WPI; 2001-257785/26. Peptides comprising a portion of a protein selected from plasm; endostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treating g tumor growth. Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides from plasminogen, endostatin, VEGF or FL/F invention of a selected from plasminogen, endostatin, VEGF or FL/F invention is used to prevent or treat primary tumour growth or or undesired angiogenesis	
	Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides from presents, endostatin, VEGF or FLY invention of a selected from pleasminogen, endostatin, VEGF or FLY invention is used to previous or treat primary tumour fromth or	tumor growth. Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides from plasmainogen, endostatin, VEGF or FLY invention of a selected from plasmainogen, endostatin, VEGF or FLY invention is used to previour or treat primary tumour growth or	endostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treating prompt. Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides from plasminogen, endostatin, VEGF or FLY invention of a selected from plasminogen, endostatin, VEGF or FLY invention is used to previent or treat primary functions.	Peptides comprising a portion of a protein selected from plasm; endostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treating p tumor growth. Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides from plasminogen, endostatin, VEGF or FLY portion of a selected from plasminogen, endostatin, VEGF or FLY invention of a selected from plasminogen.	Homo sapiens. WO200118030-A2. 15-MAR-2001. 01-SEP-2000; 2000WO-SG000131. 03-SEP-1999; 99SG-00004310. (UVSI-) UNIV SINGAPORE NAT. Ge R, Kini RM; WPI; 2001-257785/26. Peptides comprising a portion of a protein selected from plasm; endosterin, VEGF, FLT-1 and KDR/FLK-1 are useful for treating ptumor growth. Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides from protein of a selected from plasminogen, endostatin, VEGF or FLY protein of a selected from plasminogen, endostatin, VEGF or FLY protein of a selected from plasminogen, endostatin, VEGF or FLY protein of a selected from plasminogen, endostatin, VEGF or FLY protein of a selected from plasminogen from plasmi	Anti-anglogenesis; plasminogen; VEGF; vascular endothelial grow FLT-1; tumour; metastasis; cancer. Homo sapiens. WO200118030-A2. 15-MAR-2001. 01-SEP-2000; 2000WO-SG000131. 03-SEP-1999; 99SG-00004310. (UYSI-) UNIV SINGAPORE NAT. Ge R, Kini RM; WPI; 2001-257785/26. Peptides comprising a portion of a protein selected from plasmiendostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treating it tumor growth. Claim 7; Page 18; 34pp; English. The present invention relates to anti-anglogenesis peptides from postion of a selected from plasminogen, endostatin, VEGF or FLY postion of a selected from plasminogen, endostatin, VEGF or FLY postion of a selected from plasminogen, endostatin, VEGF or FLY postion of a selected from plasminogen, endostatin, VEGF or FLY protein of a selected from plasminogen, endostatin, vector FLY protein of a selected from plasminogen primary funnir propertion of a protein of a selected from plasminogen primary funnir propertion of a protein protein present invention for present protein primary funnir propertion of a protein present function present protein present present protein present protein present present present protei	Anti-angiogenesis; plasminogen; VEGF; vascular endothelial grow FLT-1; tumour; metastasis; cancer. Homo sapiens. WO200118030-A2. 15-MAR-2001. 01-SEP-2000; 2000WO-SG000131. 03-SEP-1999; 99SG-00004310. (UYSI-) UNIV SINGAPORE NAT. Ge R, Kini RM; WPI; 2001-257785/26. Peptides comprising a portion of a protein selected from plasm: endostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treating it tumor growth. Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides from protein of a selected from plasminogen, endostatin, VEGF or FLY poption of a selected from plasminogen, endostatin, VEGF or FLY protein of a selected from plasminogen, endostatin, VEGF or FLY protein of a selected from plasminogen, endostatin, vEGF or FLY protein of a selected from plasminogen primary frumor proven or Freat primary frumor proven or present frumor proven or present provention of a selected from plasminogen primary frumor provention of a provention of present provention of present provention of present provention of present provention or present provention of present provention of present provention of present provention present p	5
or undesired angiogenesis	Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides	tumor growth. Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides norming of a selected from plasmingen. endostatin. UEGF or	endostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treatin tumor growth. Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides norming of a selected from plasmingen, endostatin. VEGF or	Peptides comprising a portion of a protein selected from pla endostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treatin tumor growth. Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides notion of a selected from plasmingen, endostatin, VEGF or	Homo sapiens. WO200118030-A2. 15-WAR-2001. 01-SEP-1999; 99SG-00004310. (UYSI-) UNIV SINGAPORE NAT. Ge R, Kini RM; WPI; 2001-257785/26. Peptides comprising a portion of a protein selected from plaendostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treatin tumor growth. Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides nortion of a selected from plaeningen. endostatin. VEGF or	Anti-angiogenesis; plasminogen; VEGP; vascular endothelial FLI-1; tumour; metastasis; cancer. Homo sapiens. WO200118030-A2. 15-MAR-2001. 01-SEP-2000; 2000WO-SG000131. 03-SEP-1999; 99SG-00004310. (UYSI-) UNIV SINGAPORE NAT. Ge R, Kini RM; WPI; 2001-257785/26. Peptides comprising a portion of a protein selected from piendostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treatitumor growth. Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides nortion of a saled-fed from plasminoden, endostatin, VEGF por nortion of a saled-fed from plasminoden, endostatin, VEGF por nortion of a saled-fed from plasminoden.	Anti-angiogenesis; plasminogen; VEGF; vascular endothelial FLT-1; tumour; metastasis; cancer. Homo sapiens. WO200118030-A2. 15-WAR-2001. 01-SEP-2000; 2000WO-SG000131. 03-SEP-1999; 99SG-00004310. (UYSI-) UNIV SINGAPORE NAT. Gp R, Kini RM; WPI; 2001-257785/26. Peptides comprising a portion of a protein selected from phendostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treat: tumor growth. Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides nortion of a salected from plasminoden, endostatin, VEGF population of a particular phenomena growth.	į
invention is used to prevent or treat primary tumour growth or or undesired angiogenesis	Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides	tumor growth. Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides	endostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treatin tumor growth. Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides	Peptides comprising a portion of a protein selected from pla endostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treatin tumor growth. Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides	Homo sapiens. WO200118030-A2. 15-MAR-2001. 01-SEP-2000; 2000WO-SG000131. 03-SEP-1999; 99SG-00004310. (UVSI-) UNIV SINGAPORE NAT. Ge R, Kini RM; WPI; 2001-257785/26. Peptides comprising a portion of a protein selected from pla endostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treatin tumor growth. Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides	Anti-angiogenesis; plasminogen; VEGF; vascular endothelial FLI-1; tumour; metastasis; cancer. Homo sapiens. WO200118030-A2. 15-MAR-2001. 01-SEP-2000; 2000WO-SG000131. 03-SEP-1999; 99SG-00004310. (UYSI-) UNIV SINGAPORE NAT. Ge R, Kini RM; WPI; 2001-257785/26. Peptides comprising a portion of a protein selected from pendostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treattumor growth. Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides	Anti-angiogenesis; plasminogen; VEGF; vascular endothelial FLT-1; tumour; metastasis; cancer. Homo sapiens. WO200118030-A2. 15-MAR-2001. 01-SEP-2000; 2000WO-SG000131. 03-SEP-1999; 99SG-00004310. (UYSI-) UNIV SINGAPORE NAT. Ge R, Kini RM; WPI; 2001-257785/26. Peptides comprising a portion of a protein selected from pendostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treatitumor growth. Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides	
portion of a selected from plasminogen, endostatin, VEGF or FL/ invention is used to prevent or treat primary tumour growth or or undesired angiogenesis		_				Anti-angiogenesis; plasminogen; VEGF; vascular endothelial FLT-1; tumour; metastasis; cancer. Homo sapiens. WO200118030-A2. 15-MAR-2001. 01-SEP-2000; 2000W0-SG000131. 03-SEP-1999; 99SG-00004310. (UYSI-) UNIV SINGAPORE NAT. Ge R, Kini RM; WPI; 2001-257785/26. Peptides comprising a portion of a protein selected from piendostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treat; tumor growth. Claim 7; Page 18; 34pp; English.	Anti-angiogenesis; plasminogen; VEGF; vascular endothelial FLT-1; tumour; metastasis; cancer. Homo sapiens. WO200118030-A2. 15-MAR-2001. 01-SEP-2000; 2000WO-SG000131. 03-SEP-1999; 99SG-00004310. (UYSI-) UNIV SINGAPORE NAT. Ge R, Kini RM; WPI; 2001-257785/26. Peptides comprising a portion of a protein selected from piendostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treatitumor growth. Claim 7; Page 18; 34pp; English.	
The present invention relates to anti-angiogenesis peptides fro portion of a selected from plasminogen, endostatin, VEGF or FL/ invention is used to prevent or treat primary tumour growth or or undesired angiogenesis						Anti-anglogenesis; plasminogen; VEGF; vascular endothelial FLT-1; tumour; metastasis; cancer. Homo sapiens. WO200118030-A2. 15-MAR-2001. 01-SEP-2000; 2000WO-SG000131. 03-SEP-1999; 99SG-00004310. (UYSI-) UNIV SINGAPORE NAT. Gp R, Kini RM; WPI; 2001-257785/26. Peptides comprising a portion of a protein selected from plendostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treatitumor growth. Claim 7; Page 18; 34pp; English.	Anti-angiogenesis; plasminogen; VEGF; vascular endothelial FLT-1; tumour; metastasis; cancer. Homo sapiens. WO200118030-A2. 15-WAR-2001. 01-SEP-2000; 2000WO-SG000131. 03-SEP-1999; 99SG-00004310. (UYSI-) UNIV SINGAPORE NAT. Ge R, Kini RM; WPI; 2001-257785/26. Peptides comprising a portion of a protein selected from pendostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treattumor growth. Claim 7; Page 18; 34pp; English.	
The present invention relates to anti-angiogenesis peptides from portion of a selected from plasminogen, endostatin, VEGF or FLI invention is used to prevent or treat primary tumour growth or or undesired angiogenesis						Anti-angiogenesis; plasminogen; VEGF; vascular endothelial FLI-1; tumour; metastasis; cancer. Homo sapiens. WO200118030-A2. 15-MAR-2001. 01-SEP-2000; 2000WO-SG000131. 01-SEP-1999; 99SG-00004310. (UYSI-) UNIV SINGAPORE NAT. Ge R, Kini RM; WPI; 2001-257785/26. Peptides comprising a portion of a protein selected from pendostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treattumor growth.	Anti-angiogenesis; plasminogen; VEGF; vascular endothelial FLT-1; tumour; metastasis; cancer. Homo sapiens. WO200118030-A2. 15-MAR-2001. 01-SEP-2000; 2000WO-SG000131. 03-SEP-1999; 99SG-00004310. (UYSI-) UNIV SINGAPORE NAT. Ge R, Kini RM; WPI; 2001-257785/26. Peptides comprising a portion of a protein selected from pendostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treattumor growth.	e 18; 34pp; English.
Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides fro portion of a selected from plasminogen, endostatin, VEGF or FL' invention is used to prevent or treat primary tumour growth or or undesired angiogenesis						Anti-angiogenesis; plasminogen; VEGF; vascular endothelial FLT-1; tumour; metastasis; cancer. Homo sapiens. WO200118030-A2. 15-MAR-2001. 01-SEP-2000; 2000W0-SG000131. 03-SEP-1999; 99SG-00004310. (UYSI-) UNIV SINGAPORE NAT. Ge R, Kini RM; WPI; 2001-257785/26. Peptides comprising a portion of a protein selected from piendostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treat; tumor growth.	Anti-angiogenesis; plasminogen; VEGF; vascular endothelial FLT-1; tumour; metastasis; cancer. Homo sapiens. WO200118030-A2. 15-MAR-2001. 01-SEP-2000; 2000WO-SG000131. 03-SEP-1999; 99SG-00004310. (UYSI-) UNIV SINGAPORE NAT. Ge R, Kini RM; WPI; 2001-257785/26. Peptides comprising a portion of a protein selected from piendostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treatitumor growth.	
Peptides comprising a portion of a protein selected from plasm, endostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treating tumor growth. Claim 7; Page 18; 34pp; English. The present invention relates to anti-angiogenesis peptides from portion of a selected from plasminogen, endostatin, VEGF or FL/invention is used to prevent or treat primary tumour growth or or undesired angiogenesis					Homo sapiens. WO200118030-A2. 15-MAR-2001. 01-SEP-2000; 2000WO-SG00013 03-SEP-1999; 99SG-0000431 (UYSI-) UNIV SINGAPORE NAT. Ge R, Kini RM; WPI; 2001-257785/26. The invention discloses a peptide comprising a portion of a protein e.g. plasminogen, endostatin (Endo-1-4), vascular endothelial growth factor (VEGEP, FIL-1 or kinase insert domain containing receptor/FLK-1. These peptides are able to act as potent angiogenic inhibitors (Angio-1-5) inhibiting endothelial cell proliferation and retarding tumour growth. CC Angiogenesis is the process of new blood vessel formation from precessing the structures. It plays an important on ingration and assembly into tubule structures. It plays an important role in normal physiological functions such as embryonic development and wound healing. Inappropriate angiogenesis is also associated with various pathological conditions including tumour growth and metastasis, rheumatoid arthritis and psoriasis. Anticancer therapy by inhibiting tumour angiogenesis is called antiangiogenic therapy by inhibiting tumour angiogenesis full provided by protein-protein interactions are crucial to many physiological and pharmacological processes and the peptides disclosed interfere with these interactions. The peptides and the pestides disclosed interfere with these interactions. The peptides are useful for preventing metastasis. The sequences presented in ABG97510-ABG97559 are examples of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Endostatin; angiogenesis; cancer; tumour; rheumatoid arthritis; psoriasis; ocular; Osler-Webber Syndrome; myocardial; telangiectasia; plaque neovascularisation; haemophiliac joint; angiofibroma; inhibitor; wound granulation; intestinal adhesion; atherosclerosis; scleroderma; hypertrophic scar; cat scratch disease; Rochele minalia quintosa; Helicobacter pylori ulcer; birth control; collagen alpha type XVIII.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is a peptide which is effective in inhibiting undesirable angiogenesis. Angiogenesis is the process of new blood vessel formation from pre-existing vessels. Inappropriate angiogenesis is associated with various pathological conditions including solid tumour growth and metastasis. The present peptide can be used to to prevent tumour metastasis or inhibit the growth of a primary tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Peptides having potent anti-angiogenic activity, useful for the treatment of tumors, comprise a portion of a {\rm FLT-1} protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Angiogenesis; plasminogen; endostatin; Endo-; VEGF; vascultar endothabial growth factor; FLT-1; kinase insert domain; FLK-1; angiogenic inhibitor; Angio-; endothelial cell; proliferation; tumour growth; blood vessel formation; migration; tubule structure; embryonic development; wound healing; tumour metaetssis; rheumatoid arthritis; psoriasis; anticancer; therapy; antiangiogenic therapy; mitogen; tyrosine kinase receptor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            proliferation was isolated and is characterised by its preferred National amino acid sequence. The present sequence represents the first confideration acid sequence. The present sequence corresponds to an incernal 20 amino acid fragment found in mouse collagen alpha type XVIII starting at amino acid fragment found in mouse collagen alpha type XVIII starting at amino acid fragment found in human alpha I type XVIII starting at amino acid fragment found in human alpha I type XVIII starting at amino acid fragment found in human alpha I type XVIII starting at amino acid 1132 and ending at amino acid 1151. Endostatin can be isolated from murine hemangioendothelioma. The endostatin can be used to treat angiogenesis related diseases, e.g. angiogenesis dependent cancers, benign tumours, rheumatoid arthitis, psoriasis, collar angiogenesis benign tumours, rheumatoid arthitis, psoriasis, collar angiogenesis of iseases, ogler-Webber Syndrome, myocardial angiogenesis, plaque neovascularisation, telangiecteaia, haemophiliac joints, angiofibroma, wound granulation, incestinal adhesions, atherosclerosis, scleroderma, the endostatin can also be used to prevent embryo implantation, i.e. in birth control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mouse; endothelial cell proliferation inhibitor; collagen XVIII; angiogenesis inhibitor; anti-tumour; cytostatic; antipsoriatic; vasotropic; determatological; ophthalmological; vulnerary; antiarteriosclerotic; antidiabetic; haemostatic; contraceptive; ocular angiogenic disease; ahterosclerosis; scleroderma; myocardial angiogenesis; telangiectasia; angiofibroma; wound granulation.
                                                                                                                                                                                                                                         Isolated endostatin - useful for treating, e.g. angiogenesis dependent

specific process in vivo. The sequence corresponds to a C-terminal fragment of newly identified collagen type XVIII. Recombinant mouse endostatin (20 mg/kg) was administered subcutaneously to mice implanted with Lewis lung carcinomas. There was tumour mass regression non-detectable levels after 12 days of therapy due to the anglogenesis inhibitory activity of endostatin. Thus the protein is useful for treatment of anglogenesis-dependent cancers. The polynucleotide and polypeptide sequences of this endostatin are useful for treatment of majogenesis, plaque neovascularisation, telangiectasis, myocardial anglogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, anglofibroma and wound garanulation, for treatment of diseases related to excessive or abnormal stimulation of endothelial cells e.g. intestinal adhesions, atherosclerosis, scleroderma. The protein may also be useful as a birth control agent by reducing or preventing uterine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel endostatin capable of inhibiting endothelial cell proliferation and angiogenesis, useful for treating angiogenesis-dependent cancers and as birth control agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         vascularisation. The gene for endostatin may be isolated from cells or tissue that express high levels of endostatin, eg. tumour cells, by generating cDNA from mRNA using reverse transcriptase and then amplifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               psoriasis; scleroderma; Crohn's disease; corneal disease; retinopathy; arthritis; wound healing; Helicobacter pylori; peptic ulcer; gene therapy; angiostatin antagonist; endostatin antagonist; antiantiangiogenic; cytostatic; antiarthritic; antilnflammatory; cerebroprotective; antidiabetic; virucide; antipyretic; vulnerary; gynaecological; cat scratch fever.

The invention relates to an isolated mouse endostatin (potent inhibitor endothelial proliferation). Also include are a compound comprising an isolated nucleic acid sequence encoding the endostatin protein (or an isolated antibody capable of specifically binding to endostatin protein), treating an angiogenesis-related disease, treating angiogenesis-dependent cancer, a method of birth control, a composition comprising angiostatin contect and endostatin and making the endostatin protein. The endostatin is useful for preparing a composition for treating an angiogenesis-related disease, e.g. angiogenesis-dependent cancer, psoriasis, wound granulation or atherosclerosis. Microsequence analysis of the 20 kDa inhibitor of capillary endothelial cell proliferation from the conditioned media or revealed identity to a C-terminal fragment of collagen XVIII. An 18-amino condition and making the conditioned media coll nubibitor of capillary endothelial cell proliferation confirmed that it was identical to a C-terminal fragment of the NCI domain. The present inhibitory fragment of collagen XVIII was named endostatin. The present inhibitory fragment of the isolated endostatin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   haemangioma, leukaemia, metastasis, telangiectasia, psoriasis, scleroderma, pyogenic granuloma, myocardial anglogenesis, plaque neovascularisation, coronary collateral argingenesis, corneal disease, arteriovenous malformation, ischaemic limb angiogenesis, corneal disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cytostatic; vulnerary; vasotropic; antipsoriatic; dermatological; cardiant; ophthalmological; antidiabetic; antiarthritic; antiulcer; osteopathic; gynaecological; contraceptive; endostatin; sucrose octasulfate; angiogenesis inhibitor; endostatin proliferation inhibitor; endostatin biosynthesis; anti-angiogenic compound; collagen type XVIII; endothelial cell-related disorder; angiogenesis related disease; cancer; endothelial cell-related disorder;

The present invention provides endostatin peptides which can be used in the modulation of angiogenesis. This is useful in the treatment of cancers, inflammation, rheumatiof arthritis, chronic articular rheumatism, psoriasis, disorders associated with inopportune invasion of prematurity, macular degeneration, corneal graft rejection, retrolental fibroplasia, rubosois, capillary proliferation in atherosclerotic plaques and osteoporosis. Other angiogenesis-dependent algaeses include Osler-Webber syndrome, mycoardial angiogenesis, plaque neovasculisation, telangiectasia, haemophilac joints and wound granulation. In addition, the peptides can be used as birth control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a number of peptides derived from endostatin which exhibit antiangiogenic activity. These may be used in the treatment of cancer. The present sequence is one of the peptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Polypeptides derived from endostatin exhibiting antiangiogenic activity useful for treatment of angiogenesis-dependent tumors.
                                                                                                                   Endostatin peptide comprising at least four endostatin amino acid residues are e.g. angiogenesis inhibitors for treating cancer and diabetic retinopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   100.0%; Score 66; DB 4; Length 23; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      요
                                                                                                                                                                                                                                                                                  The invention describes a composition comprising endostatin and sucrose octasulfate. Also described are: a new endostatin protein, which is a copenant and specific inhibitor of angiogenesis and endothelial proliferation; molecular probes for the ribonucleic acid and decoration; molecular probes for the ribonucleic acid and clean decer and measure endostatin protein serving as and calls; various forms of recombinant endostatin protein serving as and cells; various forms of recompounds; nucleic acid sequences comprising nucleocide codons that code for the endostatin; and te peptide for fragments; identification of receptors specific for endostatin; comprising nucleocide codons that code for the endostatin; comprising nucleocide codons that code for the endostatin in biological fragments; identification of receptors specific for endostatin; comprising nucleocides capable of releasing endostatin in biological disorders involving detection and measurement of endostatin in biological cliuids and tissues. The composition is useful for treating angiogenesis related diseases including cancer, heemangioma, leuksemia, metastasis, telangiectasia, psoriasis, scleroderma, pyogenic granuloma, myocardial angiogenesis, nevescularis psoriasis, scleroderma, pyogenic granuloma, myocardial capacidis, nevescularis disbetic retinopathy, retrolental cibroplasia, arthritis, diabetic neovascularisation, macular cibroplasia, hematopoiesis, ovulation, pactor, fractures, keloids, vasculogenesis, hematopoiesis, ovulation, placer, fractures, keloids, cor birth control. This is the amino acid sequence of human endostatin N. Cor birth control. This is the amino acid sequence of human endostatin N. Cor birth control. This is the amino acid sequence of human endostatin N. Cor birth control.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                    Composition useful for treating angiogenesis related diseases e.g. cancer comprises endostatin and sucrose octasulfate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Endostatin, antiangiogenic, angiogenesis, human, mouse, chicken, cancer, inflammation, angiogenesis-dependent disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present peptide was analysed in a study of the expression and analysis of sig-mEndo, which comprises murine endostatin attached to the murine lg-kappa signal sequence. Sig-mEndo was introduced into an adenoviral vector is useful for expressing endostatin in a mammalian cell such as an A549 or Hep3B cell. It is useful for treating other diseases and disorders associated with angiogenesis, such as neovascular diseases of the eye, including diabetic retinopathy, cardiovascular disease, arthritis, psoriasis, cerebral codedma and intravascular coagulopathy (Kasabach-Merritt syndroma). The vector inhibits, prevents or destroys the growth of tumours by preventing the formation of blood vessels in tumours, such as lymphoma and leukaemia
                                                                                                                                                                                                                                                                                  Mouse; endostatin; antitumour; cytostatic; antiarthritic; antipsoriatic; antidiabetic; ophthalmological; gene therapy; angiogenic inhibitor; adenoviral vector; diabetic retinopathy; cardiovascular disease; arthritis; psoriasis; cerebral oedema; intravascular coagulopathy; lymphoma; leukaemia; sig-mEndo; fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Adenoviral vector for treating tumors and disorders associated with angiogenesis, such as cancer, arthritis, and psoriasis, comprises a DNA sequence encoding an angiogenic inhibitor, particularly endostatin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                    This invention describes a novel preparation which inhibits the proliferation of blood vessel endothelium and prevents the regeneration estivity of tumour blood vessels. The preparation can also be used as a biological preparation in the treatment of tumours. This sequence represents the murine endostatin protein described in the invention

Claim 31; Fig 2; 105pp; English

```
This invention describes a novel viral gene therapy vector comprising a nucleic acid molecule encoding an anti-angiogenic polypeptide chosen from human or murine endostatin and angioagenesis-inhibiting fusions and fragments, where the viral vector is sufficiently attenuated for use in human gene therapy. The products of the invention have anti-angiogenic, cytostatic, anti-diabetic and ophthalmological activity. The vector is used in gene therapy for inhibiting tumour growth in humans harbouring a solid tumour. The vector expresses an anti-angiogenic polypeptide. An additional use comprises treatment of diabetic retinopathy, where the anti-angiogenic polypeptide inhibits angiogenesis in the vicinity of the retina. The vector is administered to cells exvivo and then administered to the patient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               anglogenesis; Inhibitor; cytostatic; antirheumatoid; antiarthritic; antipsoriatic; antidiabetic; ophthalmological; immunosuppressant; vasotropic; vulnerary; treatment; antiarteriosclerosis; tumour; metastasis; atherosclerosis; porniasis; rheumatoid arthritis; cular anglogenic disease; diabetic retinopathy; macular degeneration; myocardial anglogenesis; plaque neovascularisation; telangiectasia; wound granulation; keloid scar; gene therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence is the mouse endostatin. The invention relates to a the mutant endostatin (EM), which has anti-angiogenic activity, and is designated EMI. Compositions comprising EMI or fusion proteins comprising CC EMI, are useful for treating diseases characterised by angiogenic EMI, are useful for treating diseases characterised by angiogenic cc EMI, are useful for treating diseases characterised by angiogenic cc rheumatoria arthritis, psoriasis, ocular angiogenesis, Osler-Webber Syndrome, myocardial angiogenesis, ocular angiogenesis, Osler-Webber CS yndrome, myocardial angiogenesis, scleroderma, hypertrophic scars, cc intestinal adhesions, atheroscierosis, scleroderma, hypertrophic scars, cc at scratch disease, Helicobacter pylori ulcers, dialysis graft vascular access stenosis, contraception and Obesity. In particular, the diseases CC treatable by EMI comprise cancer, especially renal cancer. The methods provide a means for introducing EMI into mammalian cells via gene therapy, for production of EMI via recombinant means, as well as CC recombinant production of the EMI protein. EMI performs as well as CC recombinant production of the EMI protein. EMI performs as well or better than whole endostatin. Use of EMI is advantageous for treatment of capted angles and may be able to better penetrate tissues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Plasminogen, murine, angiostatin, endostatin, gene therapy, vector; anti-angiogenic; attenuation, cytostatic; anti-diabetic; ophthalmology; tumour growth; solid tumour; diabetic retinopathy; retina.

Novel fusion protein of angiostatin or endostatin and an immunoglobulin FC region, useful for treating conditions mediated by angiogenesis, such as rheumatoid arthritis, tumors and macular degeneration.

Example 5; Page 48-49; 68pp; English.

a signal sequence, an immunosibolin Foregion, and an anglogenesis inhibitor selected from angiostatin, endostatin, a plasminogen fragment having angiostatin activity, a collagen XVIII fragment having endostatin activity, or combinations of them. The fusion protein (immunofusin) is used to inhibit angiogenesis and to treat diseases or conditions mediated by angiogenesis. Conditions that may be treated include solid tumours, blood born tumours metastasis, benign tumours including mediated haemangiomas, acoustic neuromas, neurofibromas, trachomas and pyrogenic confidence of the fibroplasis, contain angiogenic diseases e.g. diabetic retinopathy, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental confibroma, wound granulation, telangiectasia, haemophilac joints, plaque neovascularisation, telangiectasia, haemophilac joints, angiofibroma, wound granulation, and excessive or abnormal stimulation of endothelial cells, intestinal cells, atherosclerosis, sclercdermal and hypertrophic scars, i.e. keloid scars. The DNA constructs may be used in the construction of immunofusin murine immunoglobulin Fc fragment The patent discloses a DNA molecule encoding a fusion protein comprising

Batent No. 6200954

GENERAL INFORMATION:
APPLICANT: Kini, R. Manjunatha
TITLE OF INVENTION: Small Peptides Having Potent Anti-Angiogenic Activity
ITLE REFERENCE: 1781-170P
CURRENT APPLICATION NUMBER: US/09/385,442

CURRENT FILING DATE: 1999-08-30

BARLIER RILING DATE: 1999-09-04

NUMBER OF SEQ ID NOS: 50

SOFTWARE PETENTIN Ver. 2.0

SEQ ID NO 30

LENGTH: 13

Sequence 1, Application US/09315689

Patent No. 6346510

GENERAL INFORMATION:

APPLICANT: FOLKman, Judah

APPLICANT: FOLKman, Therapeutic Antiangiogenic Endostatin Compositions

TITLE OF INVENTION: Therapeutic Antiangiogenic Endostatin Compositions

FILE REFRENCE: 05213-0229

CURRENT APPLICATION UNMER: US/09/315,689

CURRENT FILING DATE: 1999-05-20

NUMBER OF SEQ ID NOS: 6

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 1

LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

Sequence 13, Application US/09561500

Sequence 13, Application US/09561500

GENERAL INFORMATION:

APPLICANT: Philip E. Thorpe

TITLE OF INVENTION: ANTIBODY COMPOSITIONS FOR SELECTIVELY INHIBITING VEGF

TITLE REPERENCE: 4001.002500

CURRENT APPLICATION NUMBER: US/09/561,500

CURRENT FILING DATE: 2000-04-28

PRIOR APPLICATION NUMBER: 60/131,432

PRIOR APPLICATION NUMBER: 60/131,432

PRIOR APPLICATION NUMBER: 2000-04-28

NUMBER OF SEQ ID NOS: 44

SEQ ID NO 13

LENGTH: 191

LENGTH: 191
Sequence 36, Application US/08985526
Patent No. 6080728
GENERAL INFORMATION:
APPLICANT: Mixeon, James A
TITLE OF INVENTION: CARRIER: DNA COMPLEXES CONTAINING DNA
TITLE OF INVENTION: THERAPY
TITLE OF INVENTION: THERAPY
TITLE OF INVENTION: THERAPY

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ALIGNMENTS

RESULT 1

```
The present invention relates to anti-angiogenesis peptides from a portion of a selected from plasminogen, endostatin, VEGF or FLT-1. The invention is used to prevent or treat primary tumour growth or metastasis or undesired angiogenesis
                                                                                                       Anti-angiogenesis; plasminogen; VEGF; vascular endothelial growth factor; FLT-1; tumour; metastasis; cancer.
                                                                                                                                                                                                                                                                                                                                   Peptides comprising a portion of a protein selected from plasminogen, endostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treating primary tumor growth.
                                                                                   Exemplary anti-angiogenic peptide #29.

Anglogenesis is the process of new blood vessel formation from pre-existing vessels. Inappropriate anglogenesis is associated with various pathological conditions including solid tumour growth and metastasis. The present peptide can be used to to prevent tumour metastasis or inhibit the growth of a primary tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Peptides having potent anti-angiogenic activity, useful for the treatment of tumors, comprise a portion of a FLT-1 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Angiogenesis; plasminogen; endostatin; Endo-; VEGF; vascular endothabial growth factor; FLT-1; kinase insert domain; FLK-1; angiogenic inhibitor; Angio-; endothelial cell; proliferation; tumour growth; blood vessel formation; migration; tubule structure; embryonic development; wound healing; tumour metastasis; rheumatoid arthritis; psorial antiangiogenic therapy; mitogen; tyrosine kinase receptor.
                                                                                                                                                                                          Cytostatic; angiogenesis inhibitor; tumour metastasis; tumour growth.

The invention discloses a peptide comprising a portion of a protein e.g. plasminogen, endostatin (Endo-1-4), vascular endothelial growth factor (VEGP), FLT-1 or kinase insert domain containing receptor/FLK-1. These peptides are able to act as potent angiogenic inhibitors (Angio-1-5) inhibiting endothelial cell proliferation and retarding tumour growth. CC Angiogenesis is the process of new blood vessel formation from precessive is the process of new blood vessel formation from precessing the same proving endothelial cell proliferation, migration and assembly into tubule structures. It plays an important role in normal physiological functions such as embryonic development and wound healing. Inappropriate angiogenesis is also associated with various pathological conditions including tumour growth and metastasis, rheumatoid arthritis and psoriasis Anticancer therapy by inhibiting tumour angiogenesis is called antiangiogenic therapy by inhibiting tumour angiogenesis is that functions through two high affinity tyrosine kinase receptors, FLT-1 and FLK-1 (not defined). Protein-protein interactions are crucial to many physiological and pharmacological processes and the peptides disclosed interactions. The sequences presented in ABG97510-ABG97559 are examples of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

the modulation of anglogenesis. This is useful in the treatment of cancers, inflammation, rheumatoid arthritis, chronic articular rheumatism, psoriasis, disorders associated with inopportune invasion of vessels such as diabetic retinopathy, neovascular glaucoma, retinopathy of prematurity, macular degeneration, corneal graft rejection, retrolental fibroplasia, rubeosis, capillary proliferation in atheroselerotic plaques and osteoporosis. Other anglogenesis-dependent diseases include Osle-Webber syndrome, myocardial anglogenesis, plaque neovasculisation, telangiectasia, haemophilac joints and wound granulation. In addition, the peptides can be used as birth control
                                                                          Endostatin; antiangiogenic; angiogenesis; human; mouse; chicken; cancer; inflammation; angiogenesis-dependent disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention provides endostatin peptides which can be used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Endostatin peptide comprising at least four endostatin amino acid residues are e.g. angiogenesis inhibitors for treating cancer and diabetic retinopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score 39; DB 4; Length 48; Pred. No. 9.2; 0; Mismatches 2; Indels
                           Murine endostatin peptide fragment SEQ ID NO: 21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Antiangiogenic; angiogenesis; cancer; endostatin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention features to an isolated mucieic acid comprising any one or the fall antisense sequences given in the specification where expression of the nucleic acid inhibites proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense contisense nucleic acid; (2) a host cell containing the vector; (3) an isolated contisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibited by the contisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway or a gene or proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound activity; (11) a culture comprising strains in which the extent or organism acts; (9) manufacturing an antibiotic; (10) profiling a compound activity; (11) a culture comprising strains in which the extent or product is overexpressed or underexpressed; (12) determining the extent or product is overexpressed or underexpressed; (12) determining the extent or strains; or (13) identifying the target of a compound that inhibits the coult or collection of a creaming proteins or screening for homologous nucleic acids are useful for electivity; or encounted and inhibits made activity and activity acceptance or delicate molecules for rational acceptance or accept
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                       New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fig. wipo.int/pub/published_pct_sequences

The present invention describes substantially purified human proteins (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1 con the specification). ABN15762 to ABN12782 encode the human ORFX proteins given in ABP0010 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated disorder in humans, and in the manufacture of a medicament for treating a squances can be used in gene therapy. ORFX sequences can be used in gene therapy. ORFX sequences can be used in the squances can be used in gene therapy. ORFX sequences can be used in the creatment of cancer, hyperpooliferative disorders, cirrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders, paemorrhage, osteoarthritis, neurodegenerative disorders, disorders related to organ cransplantation, cardiovascular diseases, diabetes mellitus, systemic lupus erythematosus, hypertension, hypothyroidism, cholesterol ester storage disease, various immune deficiencies and disorders, infectious diseases, autoimmune thyroiditis, myasthenia gravis, graft-versus-host disease and autoimmune inflammatory eye disease. ORFX proteins are also cardinformune disorders, or periodontal disease, and for gut consequence degeneration and treatment of lung or liver fibrosis, bone degeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues and conditions resulting from systemic cytokine damage. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form at directly from WIPO at ftp.wipo.int/pub/published_pot_egeneration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gene clone of inhibitory factor for hyperplasia of inner blood vessel cells in human body's real tumor, and its use in anti-tumor blood vessel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Endostatin; murine; proliferation; blood vessel endothelium; regeneration; tumour; blood vessel; treatment; amplification.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; open reading frame; ORFX; gene therapy; cancer; cirrhosis; hyperproliferative disorder; psoriasis; benign tumour; haemorrhage; degenerative disorder; osteoarthritis; neurodegenerative disorder; cardiovascular disease; diabetes mellitus; systemic lupus erythematosus; hypertension; hypothyroidism; cholesterol ester storage disease; immune deficiency; immune disorder; infectious disease; autoimmune disorder; rheumatoid arthritis; autoimmune thyroiditis; myasthenia gravis.
                                                                                                                                                                                                                                                                                                             The present invention describes a number of peptides derived from endostatin which exhibit antiangiogenic activity. These may be used in the treatment of cancer. The present sequence is one of the peptides of the invention
                                                                                                                                                                                                          Polypeptides derived from endostatin exhibiting antiangiogenic activity useful for treatment of angiogenesis-dependent tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0; Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       activity, such as anogonesis-dependent cancers, benign tumours, the manacolar and tumours, are unfaintied as anogonesis-dependent cancers, benign tumours, themmatoid arthritis, psoriasis, ocular anogonesis, Oaler-Webber Syndrome, myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, wound granulation, intestinal adhesions, atherosclerosis, scleroderma, hypertrophic scars, cat scratch disease, Helicobacter pylori ulcers, dialysis graft vascular access stenosis, contraception and obesity. In particular, the diseases treatable by EMI comprise cancer, especially renal cancer. The methods provide a means for introducing EMI into mammalian cells via gene therapy, for production of EMI via recombinant means, as well as recombinant production of the EMI protein. EMI performs as well or better
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence is the mouse endostatin. The invention relates to a the mutant endostatin (EM), which has anti-angiogenic activity, and is designated EM1. Compositions comprising EM1 or fusion proteins comprising EM1, are useful for treating diseases characterised by angiogenic
                                                                                                                                                                                                                                                                                                                                                                                                                         EM1; anti-angiogenic peptide; endostatin; angiogenesis-dependent cancer; benign tumour; rheumatoid arthritis; psoriasis; ocular angiogenesis; osler-Webber Syndrome; mycardial angiogenesis; angiofibroma; cancer; plaque neovascularisation; telangiectais; atherosclerosis; scleroderma; dialysis graft vascular access stenosis; renal cancer; therapy.
                           This invention describes a novel preparation which inhibits the proliferation of blood vessel endothelium and prevents the regeneration activity of tumour blood vessels. The preparation can also be used as a biological preparation in the treatment of tumours. This sequence represents the murine endostatin protein described in the invention
                                                                                                                                                                           Gaps

The products of the invention have anti-angiogenic, cytostatic, anti-diabetic and ophthalmological activity. The vector is used in gene therapy for inhibiting tumour growth in humans harbouring a solid tumour. The vector expresses an anti-angiogenic polypeptide. An additional use comprises treatment of diabetic retinopathy, where the anti-angiogenic polypeptide inhibits angiogenesis in the vicinity of the retina. The vector is administered to cells ex vivo and then administered to the patient

The patent discloses a DNA molecule encoding a fusion protein comprising a signal sequence, an immunoglobulin Fc region, and an angiogenesis influitor selected from angiostatin, endostatin, a plasminogen fragment having angiostatin activity, a collagen XVIII fragment having endostatin activity, a collagen XVIII fragment having endostatin activity, or combinations of them. The fusion protein (immunofusin) is used to inhibit angiogenesis and to treat diseases or conditions mediated by angiogenesis. Conditions that may be treated include solid tumours, blood born tumours, tumour metastasis, benign tumours including haemangiomas, acoustic neuromas, neurofibromas, trachomas and pyrogenic panniomas, rheumatoid arthritis, psoriasis, orollar angiogenic diseases e.g. diabetic retinopathy, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia, rubeosis and Osler-Webber syndrome; myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, wound granulation, and excessive or abnormal stimulation of endothelial cells, intestinal cells, atherosclerosis, sclerodermal and hypertrophic scars, i.e. keloid scars, the DNA constructs may be used in the construction of immunofusin murine immunoglobulin Fc fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel fusion protein of angiostatin or endostatin and an immunoglobulin FC region, useful for treating conditions mediated by angiogenesis, such as rheumatoid arthritis, tumors and macular degeneration.
                                                                                                                                                                                                Murine, immunoglobulin Fc fragment, endostatin, immunofusin, angiogenesis; inhibitor; cytostatic; antitheumatoid; antiarthritic; antidabetic; ophthalmological, immunosuppressant; vasotropic; vulnerary; treatment, antiarteriosclerosis; tumour; metastasis; atherosclerosis; psoriasis; rheumatoid arthritis; collar angiogenic disease; diabetic retinopathy; macular degeneration; myocardial angiogenesis; plaque neovascularisation; telangiectasia; wound granulation; keloid scar; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score 39; DB 3; Length 184;

This is useful in the treatment of cancers, inflammation, rheumatoid arthritis, chronic articular rheumatism, psoriasis, disorders associated with inopportune invasion of prematurity, macular degeneration, corneal graft rejection, retrolental fibroplasia, rubosois, capillary proliferation in atherosclerotic plaques and osteoporosis. Other angiogenesis-dependent diseases include osler-Webber syndrome, myccardial angiogenesis, plaque neovasculisation, telangiectasia, haemophiliac joints and wound granulation. In addition, the peptides can be used as birth control
                                                                                               Endostatin; antiangiogenic; angiogenesis; human; mouse; chicken; cancer; inflammation; angiogenesis-dependent disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                  Endostatin peptide comprising at least four endostatin amino acid residues are e.g. angiogenesis inhibitors for treating cancer and diabetic retinopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score 39; DB 4; Length 184;

The present invention relates to an adeno-associated viral (AAV) vector comprising a polynucleotide that comprises a nucleic acid segment that encodes a choroidal or ocular neovascularisation inhibitory polypeptide operably linked to a promoter that expresses the segment to produce the polypeptide in a selected mammalian host cell. Such a vector is useful for providing a choroidal or ocular neovascularisation inhibitory polypeptide to a mammal, for use in the therapy of ocular neovascularisation, age-related macular degeneration, retinal neovascularisation, age-related macular degeneration, visual impairment, ocular dystunction, loss of vision, retinopathy, or blindness in a human. The present sequence is a protein shown in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to anti-Vascular Endothelial Growth Factor (VEGF) antibodies that bind to the same epitope as the monoclonal antibody ATCC PTA 1595 and which significantly inhibit VEGF binding to
                                                      Novel adeno-associated viral vector comprising polynucleotide encoding pigment epithelium-derived factor, useful for treating choroidal neovascularization, blindness, loss of vision.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Immunogenic composition for the treatment and diagnosis of cancer comprises an anti-VEGF (vascular endothelial growth factor) antibody binding the same epitope as the monoclonal antibody ATCC PTA 1595.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Murine, endostatin, cytostatic, antiproliferative; vascular endothelial growth factor; VEGF; antibody; VEGF2 receptor; cancer; vascularised solid tumour.

```
the VEGF receptor VEGFR2, without inhibiting VEGF binding to the VEGF receptor VEGFR1. The present sequence is murine endostatin. Endostatin may be conjugated onto the anti-VEGF antibodies of the present invention. The anti-VEGF antibodies of the present invention are useful for the treatment and diagnosis of cancer, especially vascularised solid tumours

"Crystal structure of the anglogenesis inhibitor endostatin at 1.5-A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       -i-FUNCTION: Endostatin potently inhibits endothelial cell proliferation and angiogenesis. May inhibit angiogenesis by binding to the heparan sulfate proteoglycans involved in growth factor signaling.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -!- PTM: Prolines at the third position of the tripeptide repeating unit (G-X-Y) are hydroxylated in some or all of the chains.
-!- SIMILARITY: Belongs to the fibril-associated collagens with interrupted helices (FACIT) family.
-!- SIMILARITY: Contains 1 frizzled (FZ) domain.
-!- SIMILARITY: Contains 1 TSP N-terminal (TSPN) domain.
                                                                                              SEQUENCE OF 1591-1774 FROM N.A.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-09-766-412-31

Sequence 31, Application US/09766412

Patent No. US20020103129A1

GENERAL INFORMATION:

TITLE OF INVENTION: SMALL PEPTIDES HAVING ANTI-ANGIOGENIC AND ENDOTHELIAL CELL INHIB

TITLE OF INVENTION: ACTIVITY

TITLE OF INVENTION: ACTIVITY

FILE REPRENCE: 1781-0215P

CURRENT PILIAR DATE: 2001-01-11

NUMBER OF SEQ ID NOS: 50

SOGTWARE: PatentIn version 3.1

LENGTH: 14

TYPE: PRT

CREAVISM: Mammalian

SEQ ID NO 31

LENGTH: 14

TYPE: PRT

CREAVISM: Mammalian

FEATURE:

NAME/KEY: misc feature

OCHEN MACKEY: misc feature

Sequence 13, Application US/10373561

Publication No. US20030175276A1

GENERAL INFORMATION:
APPLICANT: Philip E. Thorpe

APPLICANT: Rolf A. Brekken

TITLE OF INVENTION: ANTIBODY METHODS FOR SELECTIVELY INHIBITING VEGF

FILE REFERENCE: 4001.002582

CURRENT APPLICATION NUMBER: US/10/373,561

PRIOR FILING DATE: 2003-02-24

PRIOR FILING DATE: 2000-04-28

PRIOR FILING DATE: 1999-04-28

NUMBER OF SEQ ID NOS: 44
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ; OTHER INFORMATION: Description of Artificial Sequence: SYNTHETIC US-09-998-831-13

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
